

Motivation

- Provide sewerage to enable growth in the VCD/VOD
- Create affordable limited sewerage that does not require funding via the wider community (tax base subsidy or compulsory benefit charges)
- Limited sewerage prevents sprawling growth and maintains Littleton's character
- Achieve wider social and environmental benefits via integrated infrastructure

Conventional vs. Smart Sewering 1

- Reducing carrying costs by using technologies that are affordable at small scale and then installing capacity in phases to match growth – “just-in-time, “fit-for-purpose”
