Site Plan Approval Application
Landscape Plan***

Dear Members of the Planning Board:

Outlined below is the landscape and screening plan Aggregate Industries Northeast Region, Inc. proposes to implement as part of the berm construction on the northeast and easterly boundaries of the property related to the previously submitted site plan application to relocate existing plant equipment.

Aggregate is currently in the process of constructing a 30 foot high earthen berm along the northeastern boundary of the property. Aggregate intends to continue this berm in an easterly direction dependent on a Notice of Intent approval from the Littleton Conservation Commission. The berm will be landscaped in the following manner:

1. The berm will be hydroseeded with a Mass slope seed mix incorporated with tactifier (to help stabilize the seed) and a water retentioning agent (to help keep the seed hydrated), or similar product, beginning in early fall of 2010. This will allow the berm to dry out over the late spring and summer months and begin to stabilize prior to hydroseeding, thus allowing the grass mix to grow.
2. The seed will be allowed to grow and stabilize over the 2011 growing season. The seed will be maintained as needed.
3. Beginning in 2012, Aggregate will begin planting trees along the top of the berm. Three to five foot trees suitable to the growing and climate conditions such as white pines will be planted so that they can "fill in" quickly (i.e. staggered and spaced out appropriately). Aggregate will plant the trees over a three year period

Tel: (781) 941 – 7200

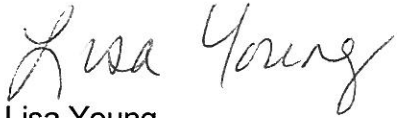

starting at the most westerly section of the berm and working towards Distribution Center Drive. Trees will be maintained as needed to ensure growth.

4. Aggregate will work with a professional landscaper and/or arborist throughout the process to optimize planting efficiency.
5. The berm will be continued down Distribution Center Drive and along Rt. 2A and landscaped as described above over the next 5-10 years.

Aggregate believes that the above outlined landscaping plan will be sufficient to ensure grass and plant growth to the earthen berm and provide an aesthetically pleasing screen between our operation and residential properties on White Tail Way.

If further information is needed, please feel free to contact me at 781-941-7200.

Sincerely,

Lisa Young
