Arbovirus Surveillance Program Report

Key Public Risk Communication Messages for This Week:

MDPH has identified four WNV positive mosquito samples from Barnstable, Middlesex, Suffolk, and Worcester Counties. Personal protection measures are recommended due to the early season arbovirus detection and average mosquito vector populations across the state. Check your risk levels throughout the season by visiting our interactive site <https://www.mass.gov/info-details/massachusetts-arbovirus-update>

Regional precipitation events and above average temperatures will support increased populations of WNV and EEE mosquito vectors. Avoid mosquito bites by using EPA approved repellents, appropriate clothing, and avoiding peak mosquito activity between dusk and dawn. Remove standing water by emptying containers and tarps.

Please review the 2025 MDPH Surveillance and Response Plan for updates to risk levels and risk messaging.
