PRELIMINARY DEVELOPMENT IMPACT REPORT
Preliminary Development Impact Report

(1) Environmental Analysis

The site is entirely upland soils, with an abutting intermittent stream along the northern back edge of the property. Bordering Vegetated Wetlands associated with this intermittent stream project a 100' Buffer Zone onto the locus property. No work is currently proposed in this Buffer. The work associated with this project will comply with the Wetlands Protection Act as well as the Town of Littleton Wetland Protection Bylaw.

Vegetative coverage analysis
The existing house, #93 Foster Street, will be retained. There are mature trees around the landscaped portion of the lot closer to the street. Further into the lot up the hill the site turns into a mixed deciduous and pine forest. Closer to the back of the lot the grade starts to drop off to the stonewall along the rear property line.

Surface water and groundwater quality and level
The proposed development of eight (8) single family homes is subject to the Stormwater Management Standards. Best management practices proposed at the site include catch basins, sediment forebays, and infiltration basins. Roof runoff may also be directed to drywells. As required by the Stormwater Management Standards, runoff will be treated and 80% of Total Suspended Solids will be removed prior to infiltration. On-site septic systems shall be designed according to Title 5 and local Board of Health Regulations.

Effects upon priority and estimated habitat for rare and endangered species, outstanding botanical features and scenic or historic environs
The area of work is not located within an area of Estimated Habitat of Rare Wildlife as indication on the most recent Estimated Habitat Map. The existing dwelling at #93 is an antique dwelling, built in 1797. This dwelling is proposed to remain on a reconfigured Approval Not Required lot along Foster Street.

Capability of soils, vegetative cover and proposed erosion-control efforts to support proposed development
According to the Natural Resources Conservation Service Web Soil Survey, the proposed project occurs largely on Charlton-Hollis-Rock outcrop complex (103B), Hydrologic Group A. Freetown Muck (53A), Hydrologic Group B/D occurs near the area of the abutting Bordering Vegetated Wetlands and intermittent stream. No work is proposed in this area.

Hydrologic Group A soils have a high infiltration rate and low runoff potential when thoroughly wet. Hydrologic Group B/D soils have a moderately low runoff potential and moderate infiltration rates, but a high water table.

Erosion controls including siltation barriers, strawbale check dams, construction entrances, and silt sacks for catch basins will prevent the indirect alteration of any resource area.
Relationship to the requirements of the Wetlands Protection Act
This project may require a Notice of Intent filing, which will comply with the Wetlands Protection Act as well as the Town of Littleton Wetland Protection Bylaw. Construction activities will comply with the Order of Conditions received from the Town.

(2) Traffic Study

Foster Street in Littleton is a two-lane road with a posted speed limit of 25 mph. A proposed Road A will serve 8 single family lots off Foster Street, approximately 323’ west of Foster Street’s intersection with Mill Road. This new road will be less than 750’ long and consist of a 22-foot paved road.

Trip Generation, 9th edition, published by the Institute of Transportation Engineers, was used to estimate traffic volumes produced by the proposed development. Trip Generation contains models for different land uses which specify the average “Vehicle Trip Ends” per unit of a particular use. For the purposes of this project Land Use Code 210, the “Single-Family Detached Housing,” model was used. The tables below summarize the number of vehicle trips estimated according to Trip Generation, 9th edition for the 8 lot development at 93 Foster Street, with the number of units being the independent variable.

Since the peak hour vehicle trips are less than 10, this project is considered a Minor Project. With a 25 mph speed limit, AASHTO Stopping Sight Distance required is 155’. There is a Stopping Sight Distance of 320’ +/- provided easterly from the intersection of the proposed Road with Foster Street, and a Stopping Sight Distance of 230’ +/- provided westerly.

Sanitary Sewer Study
This project will utilize on-site sewage disposal systems. Soil testing will be performed and septic systems will be designed in compliance with Title 5 and local Board of Health Regulations.
Water Study
A hydrant exists in Foster Street, which confirms the existence of a water main. This proposed project intends to install a water main with hydrants in the proposed cul-de-sac to service the proposed dwellings. Applicant will contact the Water Division prior to the Definitive Subdivision Application.

Public Works cost
A more accurate cost analysis will be conducted with the Definitive Subdivision submittal, as the proposed Road length and locations are subject to adjustment following Preliminary approval.

Municipal service costs
A more accurate cost analysis will be conducted with the Definitive Subdivision submittal, as the proposed Road length and locations are subject to adjustment following Preliminary approval.

Re: Preliminary Subdivision Plan at 93 Foster Street
Waiver Request Letter

Members of the Board:

On behalf of our client, Habitech Acquisition and Permitting Trust, we hereby request a waiver from Section 249-43, Streets and Paths, Section D: Access Control and Intersections, Part (10) of the Town of Littleton Subdivision of Land Regulations, Chapter 249. The proposed Road is off Foster Street, a Collector or Arterial Road. Mill Road intersects with Foster Street approximately 323° +/- from the intersection of the Proposed Road, where 400' is required.

The Proposed Road location does meet the 300' minimum offset between new street intersections per Section 249-43, Streets and Paths, Section D: Access Control and Intersections, Part (5) of the Town of Littleton Subdivision of Land Regulations, Chapter 249. This can be deemed an acceptable distance given the location of the site along a rural portion of the street with a lower posted speed limit of 25 mph.

Respectfully,

Daniel Carr, E.I.T.
