RE: Nagog Hill Road
DEP File # 204-0830
Littleton, MA

Dear Members of the Commission:

On behalf of the Applicant, Joseph Kinghorn, We have prepared the attached redline plan depicting a proposed change to the utility connections at the site.

After several site meetings with Littleton Electric Light Department (LELD), it has been determined that an overhead utility connection will result in the removal of trees along the route. It would also require several anchors being set 8-10 feet into the woods from the edge of the road. After considering this, the applicant would like to proceed with an underground connection (although much more costly for the applicant), which will eliminate the need for tree removal and will be constructed within the limits of the existing road surface. This option will also eliminate the need for maintenance trimming in the future that would be associated with the overhead lines.

With the installation of the underground electrical service, the applicant would also like to request approval to install a gas service line within the limits of the driveway.

Given that the work is being proposed within the limits of the existing driveway, and will result in less impact to the site given that trees and limbs will not need to be removed, we respectfully request that the Commission Consider the installation of the underground electrical and gas service connection within the driveway as a minor change.

Regards,
